EXECUTIVE SUMMARY

- ### Executive Summary: AI & Design Research (July 26, 2026)
- **Recursive Research Efficiency:** The introduction of the **AREX** framework marks a shift in autonomous research, utilizing a bi-level mechanism that forces agents to iteratively refine discovery through automated verification, significantly improving accuracy in complex deep-research tasks.
- **Scalable Multi-Page Development:** **Anima's** new website cloning tool enables rapid prototyping by allowing users to convert any URL into a fully functional, editable app; the system preserves navigation and routing across up to 10 pages in a single generation.
- **Stabilizing Long-Horizon Agents:** To address the reliability issues inherent in complex AI workflows, the **Self-GC** framework provides a "self-governing context" layer, ensuring LLM agents maintain performance and stability during extended, multi-step operations.
- **Agentic Reinforcement Alignment:** The **PATS** (Policy-Aware Training Scaffolding) method offers a new standard for training models, specifically aligning reinforcement learning policies with agentic behaviors to ensure more predictable and goal-oriented AI decision-making.

SECTION 1 — NEW AI MODELS

[AREX: Towards a Recursively Self-Improving Agent for Deep Research] | [July 23, 2026] |

[<https://arxiv.org/abs/2607.21461>] | [Researchers introduced AREX, a bi-level agent framework designed for deep research tasks that uses a recursively self-improving mechanism to refine answers by leveraging the asymmetry between discovery and verification.]

[Self-GC: Self-Governing Context for Long-Horizon LLM Agents] | [July 25, 2026] |

[<https://arxiv.org/abs/2607.00692>] | [This paper proposes a self-governing context framework to improve the performance and stability of LLM agents during long-horizon tasks.]

[PATS: Policy-Aware Training Scaffolding for Agentic Reinforcement Learning] | [July 25, 2026] |

[<https://arxiv.org/abs/2607.21419>] | [This research introduces a training scaffolding method specifically designed to align reinforcement learning policies with agentic behaviors.]

SECTION 2 — DESIGN-TO-CODE

[Anima Multipage Website Clone] | [July 19, 2026] | [<https://animaapp.com/blog/product-updates/>] | [Anima

released a multipage website cloning feature allowing users to paste a URL and generate a connected, editable app with preserved navigation and routing for up to 10 pages in one shot.]
