EXECUTIVE SUMMARY

- Research summary for 2026-03-31 (auto-generated fallback):
- Design-to-Code:
- AI in UI/UX Design:

SECTION 1 — NEW AI MODELS

DeepSeek V4 remains the most anticipated open-source model of

SECTION 2 — DESIGN-TO-CODE

Summary: OpenAI's Codex desktop app gained a Figma MCP integration enabling a full code↔canvas roundtrip, so teams can start from either code or design and iterate across both.

■■ Notes on Strict 48h Window (March 29–31, 2026)

No **brand-new** design-to-code product releases or announcements were detected specifically on **March 29–31, 2026** from Figma, v0, Builder.io, Locofy, Anima, or Google Stitch. The most recent concrete items above fall within the past 5–12 days. For **Locofy** and **Anima** specifically, no new releases were found in the last 2 weeks either.

SECTION 3 — AI IN UI/UX DESIGN

■■ Items NOT included (filtered out):

- Opinion pieces, listicles, and "best tools of 2026" roundups (multiple sources from past 2–6 days) — **not concrete releases**
- Framer review articles — **no new Framer product release found in this window**
- Jakob Nielsen predictions post — **dated January 2026**

Bottom line for the 24–48h window (March 29–31): No brand-new zero-day announcements were confirmed for exactly March 30–31. The most significant **recent** hard releases are the **Figma MCP write-to-canvas beta (Mar 24)** and **Google Stitch 2.0 (Mar 18–19)**, both within the past 13 days and still actively reverberating across the design community.

SECTION 4 — AI WORKFLOWS & AUTOMATION
