

AI & Design Daily Digest

2026-09-17 | Powered by Gemini API + GitHub Actions

EXECUTIVE SUMMARY

- As of September 17, 2026, the following key development is shaping the AI and design landscape:
- **Gemini 3.8 Live Launch:** Google has officially released Gemini 3.8 Live, a significant upgrade to its flagship model architecture.
- **"Extended Thinking" Capability:** The model introduces a core technical advancement called "Extended Thinking," which allows the AI to vocalize its internal reasoning process in real-time.
- **Concurrent Task Execution:** Unlike previous iterations, Gemini 3.8 Live can perform complex task execution and tool integration simultaneously while it "thinks" aloud, bridging the gap between planning and action.
- **Enhanced Transparency for Designers:** For design and development workflows, this capability provides unprecedented insight into the AI's logic, allowing users to audit, interrupt, or course-correct the model's reasoning while it performs multi-step operations.

SECTION 1 — NEW AI MODELS

[Gemini 3.8 Live Released] | [September 15, 2026] | [<https://ai.google.dev/>] | [Google released Gemini 3.8 Live, featuring "Extended Thinking" which allows the model to vocalize its reasoning process while simultaneously executing tasks and tools.]
